Research Interests

I am interested in creating adaptive and general AI for the physical and digital worlds. In the physical world, I work on scaling world models and vision-language action models. In the digital world, my focus is on developing AI that continuously learns.

Work Experience

- May 2025 - Present **Google Deepmind**, Research Scientist, Toronto, Canada
- **World Action Models:**
 - Mid-trained and post-trained [Gemini Omni](#), an omni input and output model, on robotics and human egocentric datasets to create a World Action Model (WAM) policy.
 - Deployed the WAM, in realtime, on humanoid robots with Sharpa hands to enable generalization in dexterous manipulation tasks.
 - **SIMA 2** [[2025C](#), [2025B](#), [videos](#)]
 - Post-trained Gemini flash-sized models to predict keyboard and mouse actions to complete any long-horizon task in virtual worlds.
 - Spearheaded SIMA's autonomous self-improvement in unseen worlds, to human-level performance, with a Gemini-based reward function and a Gemini-based task-setter.
 - **RoboGenie** and **Gemini Robotics 2** [[2026A](#), [videos](#)]:
 - Post-trained the [Genie 3](#) world model on robotics datasets to create a world model for humanoid and tabletop (aloha) robots.
 - RoboGenie enabled planning with Gemini Robotics VLAs, improving their success rate (almost 2x) with more test-time compute on long-horizon and long-tail tasks.
 - Integrated robogenie with [Gemini Robotics 2](#), a VLA for whole-body control, dexterous manipulation, and human-robot interaction.
- Aug 2019 - May 2025 **University of Pennsylvania**, PhD Candidate, Philadelphia, PA.
Advised by [Prof Insup Lee](#).
Closely collaborated with [Prof Dinesh Jayaraman](#), [Prof Oleg Sokolsky](#).
- Post-trained a VLA to add in-context adaptability to boost its performance on new robotic tasks with unseen objects, motions, and scenes [[2025A](#), [videos](#)].
 - Pretrained a generalist agent that can generalize to unseen robotics and game-playing environments via retrieval-augmentation & in-context learning [[2024A](#), [videos](#)].
 - Strengthened imitation learning with any neural network – diffusion models, transformers, or MLPs, via a novel semi-parametric model class called the MCNN [[2023B](#), [videos](#)].
 - Created a tool for guaranteed conformance of generative models to constraints [[2023A](#), [gifs](#)].
 - Boosted deep hierarchical RL sample-efficiency by two-orders-of-magnitude [[2022D](#), [videos](#)].
 - Enhanced adversarial robustness of NN's with guarantees [[2022A](#)].
 - Developed out-of-distribution detectors with guarantees [[2022B](#)] that run in real-time [[2021B](#)].
